

# Installation Notes

## System Requirements

- PHP recommended  $\geq 5.4x$  (min. 5.2.0)
- MySQL  $\geq 5.0.0$

## Installation Guide

- Copy the content of the ZIP file to your htdocs directory.
- Run the installation progress as usual.
- Log in to the admin backend, fill in and submit the form.

Attention: The security patches SUPEE-5994 and SUPEE-6285 of Magento are not part of the Localized Magento Editions 1.9.1.0 v4. You have to install the manually. Download and read the complete instruction in English ([LINK](#)) or German ([LINK](#)).

## Updating a Localized Magento Edition

Always use the whole tar.gz package to update a Localized Magento Edition.

Follow this progress:

- Download the latest tar.gz file of the Localized Magento Edition.
- Create a backup file of your database and filesystem first.
  - Set your shop offline in maintenance mode (create a file "maintenance.flag" without content in the Magento root directory).
- Unzip the tar.gz file.
- Copy all files to the Magento directory, overwrite the existing files.
- Set your shop online out of maintenance mode (delete the file "maintenance.flag" from the Magento root directory).
- Log out once from the admin panel and log in again.
- Empty the Magento cache.

## Uninstallation

- Remove all files from your Magento installation.
- Delete the database.
